CATALYST BELOW EFFICIENCY?
MAYBE – MAYBE NOT!

PO420
PO430
PROBLEMS?

By definition: Catalyst – Any substance of which a small proportion notably affects the reaction rate of a chemical reaction WITHOUT ITSELF BEING CHANGED OR CONSUMED.

Any one of the above items can cause the following . . .

- Check in front of the catalytic converter
- Catalytic Converters should NEVER fail
- Converters don’t get “USED UP”!

A bad converter is the result of a problem, not the cause.

Interpreting Live Data is the ONLY WAY to be sure of the problem!
